About the Building Decarbonization Alliance:

An initiative of the Transition Accelerator, the **Building Decarbonization Alliance (BDA)** is a non-partisan cross-sectoral coalition that works to inspire and inform industry and government leadership, accelerate market transformation, and get the building sector on track to meet Canada's emission reduction goals. The BDA convenes conversations, conducts original analysis, and identifies structural barriers to building decarbonization—we then work with our partners to overcome them. Our vision is to create a future where electrified buildings are part of an affordable and resilient energy systems that contributes to a **prosperous, sustainable and decarbonized Canada**. One of the BDA's primary market transformation strategies is to enhance the analytical capacity of the building sector.

About The Transition Accelerator

The **Transition Accelerator** is a pan-Canadian organization that exists to support Canada's transition to a net-zero future while solving societal challenges. Using our four-step methodology, The Accelerator works with innovative groups to create visions of a socially and economically desirable net-zero future. We then work to build out credible, capable and compelling transition pathways to make these visions a reality. The Accelerator's role is that of an enabler, facilitator, and force multiplier that forms coalitions to take steps down these pathways and get change moving on the ground.

Join us!

If you support BDA's mission and wish to be included in future research, newsletters and events, please visit www.buildingdecarbonization.ca to learn how to become a Partner, or reach out to us at info@buildingdecarbonization.ca to find out how you can help accelerate building electrification.

Introduction

The growing popularity of heat pumps highlights the importance of setting an appropriate regulatory framework to facilitate the transition to decarbonized heating. Numerous initiatives are emerging to promote all-electric buildings and the transition away from fossil fuel heating equipment. Provinces and municipalities across Canada are implementing measures to restrict or prohibit fossil fuel heating usage or installation, such as fossil fuel bans and phase-outs. In this context, this paper:

- Provides a **jurisdictional scan of policies related to building heating decarbonization and electrification**. This scan inventories efforts at the municipal and provincial levels in Canada that aim to phase out fossil fuels and accelerate building electrification.
- Aims to **identify jurisdictional authority and potential avenues for engaging** in fossil fuel bans and accelerated electrification.
- Reveals a **variety of solutions to reduce reliance on fossil fuel heating in buildings**, with no clear preference for a specific phase-out pathway. Various policy approaches target the energy source, equipment, or greenhouse gas emissions. Despite these differences, these initiatives collectively aim to decrease fossil fuel usage and accelerate building decarbonization.

A detailed list of current initiatives is provided in Appendix A, outlining each initiative and its corresponding ban deadline. This database highlights that certain municipalities and a few provinces are strengthening their climate action by phasing out fossil fuels, although at different paces. Other initiatives taking place in the US and in Europe were also listed through this scan, to provide insights into key approaches adopted in other regions.

Preliminary results indicate a positive correlation between robust local government actions and provincial codes, but further analysis is needed to evaluate the effectiveness of these building heating decarbonization initiatives.

Overview in Canada

Many Canadian jurisdictions have implemented or are discussing initiatives that encourage fuel-switching or require all-electric buildings, with **municipalities leading the way** (see Figure 1).

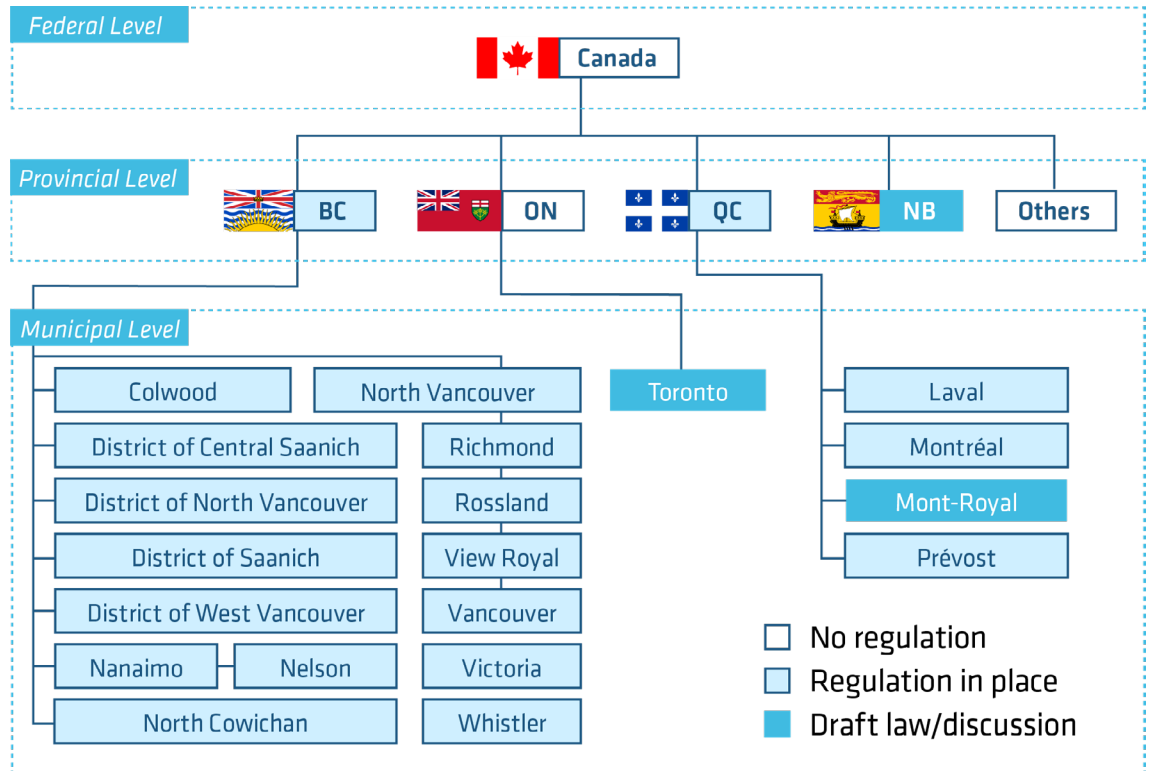

Figure 1: Building heating decarbonization regulation initiatives among the different government levels.

Various policy approaches are employed to promote building heating decarbonization:

- **Focusing on the energy source** by prohibiting new buildings from connecting to the gas grid (recommended in Montréal’s roadmap), or from using oil heating (Montréal, QC), or gas heating (ongoing discussions at Laval, QC).
- **Focusing on the equipment** by banning the installation of oil, coal, and/or gas heating systems (Central Saanich, BC; Laval, QC; province of Québec), or requiring the installation of zero-emission equipment (Vancouver, BC).
- **Focusing on energy performance** by setting energy efficiency performance levels, including the use of low-carbon energy systems, and providing guidance to transition to zero-carbon new buildings (British Columbia).
- **Focusing on emissions** by requiring buildings or space heating equipment to be zero-emissions (Victoria, BC; Prévost, QC), or setting maximum levels of GHG emissions through building performance standards (BPS) (Toronto, ON).

Federal Level

While **no policy has been enacted to specifically encourage fuel switching at the federal level**, there are initiatives to support building decarbonization. The federal government delivers grants and incentive programs to promote building renovations. Canada has also developed the National Building Code (NBC) and the National Energy Code of Canada for Buildings (NECB), which specify minimum energy efficiency standards for residential, commercial, industrial, and agricultural buildings. Several provinces have adopted the national code, aligning with federal guidelines.¹

On top of this, the federal government is committed to addressing climate change through the development of a net-zero emissions code. This commitment involves creating a comprehensive regulatory framework aimed at achieving carbon neutrality across various sectors and being a lever to accelerate climate action.

Moreover, it is important to note that the Federal Government's 2030 Emissions Reduction Plan includes a mandate to “develop regulatory, standards, and an incentive framework to support the transition off fossil-fuels for heating systems” as part of the soon to be released Canada Green Building Strategy.²

Provincial Level

Only British Columbia and Québec have adopted regulation to phase out fossil fuel in buildings at a provincial level. Québec deployed provincewide regulation restricting oil usage, while British Columbia set energy efficiency performance levels through the BC Energy Step Code and developed tools for local governments to encourage or require lower emissions in new buildings through the Zero Carbon Step Code. Ultimately, British Columbia will require all new constructions to be zero-carbon by 2030.

Reporting requirements are another significant tool to incentivize reductions in GHG emissions. While only a precursor to building performance standards, **Ontario has mandatory energy and water reporting** requirements for buildings of 50,000 square feet or more.³ This establishes a foundation for monitoring and improving environmental performance. Additionally, other provinces, such as Nova Scotia, are taking steps in the right direction by implementing various **energy efficiency initiatives**.⁴

Municipal Level

Independent bylaws were adopted in several municipalities in British Columbia and Québec. They are either based on restricting installation of fossil fuel equipment, prohibiting installation of oil and/or gas heating systems, or requiring the installation of zero-emission equipment. Nevertheless, from these diversified initiatives to ban fossil fuel heating systems in buildings, except for municipal by-laws in British Columbia that set a maximum annual amount of GHG emissions per building, **no trend stands out as a preferred fossil fuel phase-out pathway**, as illustrated in Figure 2.

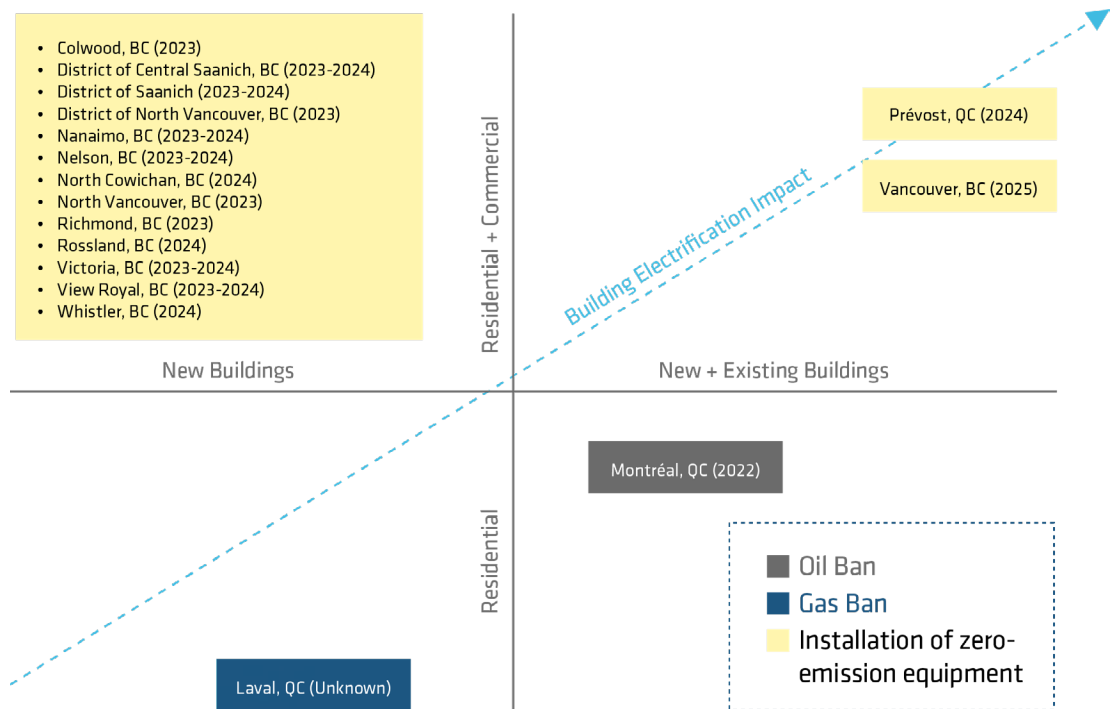

Figure 2: Overview of municipal initiatives referenced in Canada.

In addition to regulations aiming to phase out the use of fossil fuels, other measures are being employed to expedite the electrification of buildings, thus more implicitly shifting away from fossil fuel-based heating. A notable illustration of this can be seen in British Columbia, where changes in sales taxes have been made.⁵ Starting from April 2022, the province removed the sales tax on heat pumps and raised the sales tax on fossil fuel combustion systems used for indoor space or water heating or cooling, a structure that is also known as a “feebate”. Other innovative measures were recently announced. Since January 1, 2023, in the City of Vancouver (BC), all new permanently installed air-conditioning systems in existing detached homes must be electricity powered and provide low-carbon heating and cooling.⁶

Lastly, Vancouver has adopted a BPS, starting with annual energy and carbon reporting from 2024, followed by GHG limits. This by-law⁷ will come into effect progressively, targeting larger buildings first before expanding to lower-size buildings. Toronto is developing a similar by-law, which will require existing buildings to meet GHG emissions performance standards aligned with Toronto’s climate targets. Toronto anticipates placing emission requirements on all building sizes, including residential, by 2030, which would be a first in Canada.⁸ A few more municipalities have implemented green development standards (GDS) in Ontario, for new developments. These standards incorporate sustainability metrics and thresholds, aiming to design buildings with lower energy demands and GHG emissions. Likewise, in 2021 Montréal introduced a by-law requiring large building owners to annually disclose their building energy data to the city within the framework of establishing a GHG emissions performance standard for buildings, with the obligation of gradual performance improvements leading to carbon neutrality in 2040.

⁵ See Government of British Columbia, “Provincial Sales Tax on Fossil Fuel Combustion Systems and Heat Pumps” (Provincial Sales Tax Notice, issued in February 2022 and revised in July 2022). See also “British Columbia Eliminates Sales Tax on Heat Pumps” Switch It Up (4 March 2022).

⁶ Building By-law No. 12511 was amended, to update air conditioning and electrification requirements.

⁷ City of Vancouver. Annual greenhouse gas and energy limits by-law No. 13472.

⁸ City of Toronto (2023). Proposed Implementation Timeline for Emissions Performance Standards By-law.

Thermal planning emerges as another important measure supporting the decarbonization of building heating, particularly highlighted by multiple existing initiatives in Europe. In Canada, initiatives like the Federation of Canadian Municipalities (FCM) and ICLEI’s Partners for Climate Protection (PCP) program **advocate for community-level GHG inventories and energy plans**. Moreover, FCM’s funding of community energy feasibility studies, including district energy projects, provides a foundation for sustainable urban heating strategies. However, the challenge lies in ensuring that policies enable district energy in a way that covers net-zero objectives, providing a solid framework for transitioning to greener heating alternatives.

It is important to highlight that the authority of municipalities to enact such regulations is granted by the province. Moreover, **provincial laws and regulations hold higher authority than municipal by-laws**. So, in cases of conflict, if a municipal by-law is deemed incompatible with a provincial bill, **the province has the capacity to restrict municipal bodies from enacting by-laws that either support or prohibit the usage of fossil fuels** (a similar situation exists in the US, see below). In Canada to date, some provinces have been more aggressive with fossil fuel phase-out policies; British Columbia and Québec have both developed initiatives pushing for more stringent requirements promoting electrification.

What's Happening Elsewhere

USA

While several jurisdictions have enacted legislation limiting or banning fossil fuel heating in buildings, others have taken measures to oppose local initiatives aiming to implement natural gas bans (Figure 3). They have done so by introducing local pre-emption legislation to restrict and forbid such actions at the local level.

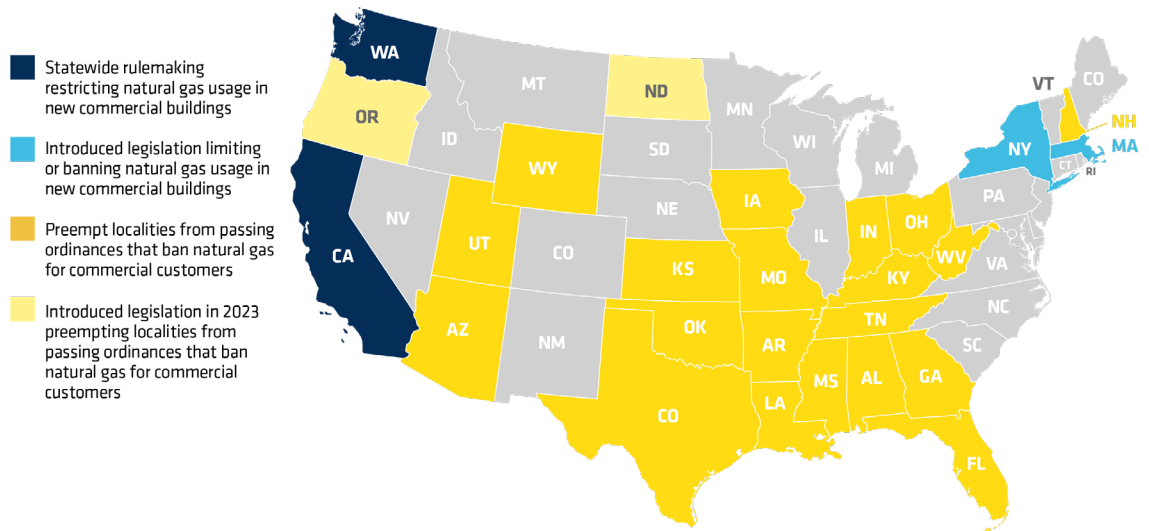

Figure 3: Local/municipal gas bans and state laws prohibiting restrictions on gas in the U.S. as of Jan 2023. (MultiState)

Europe

Numerous European governments have regulated building heating by constraining the type of energy used for building heating, constraining heating equipment requirements, or setting GHG emissions limits.

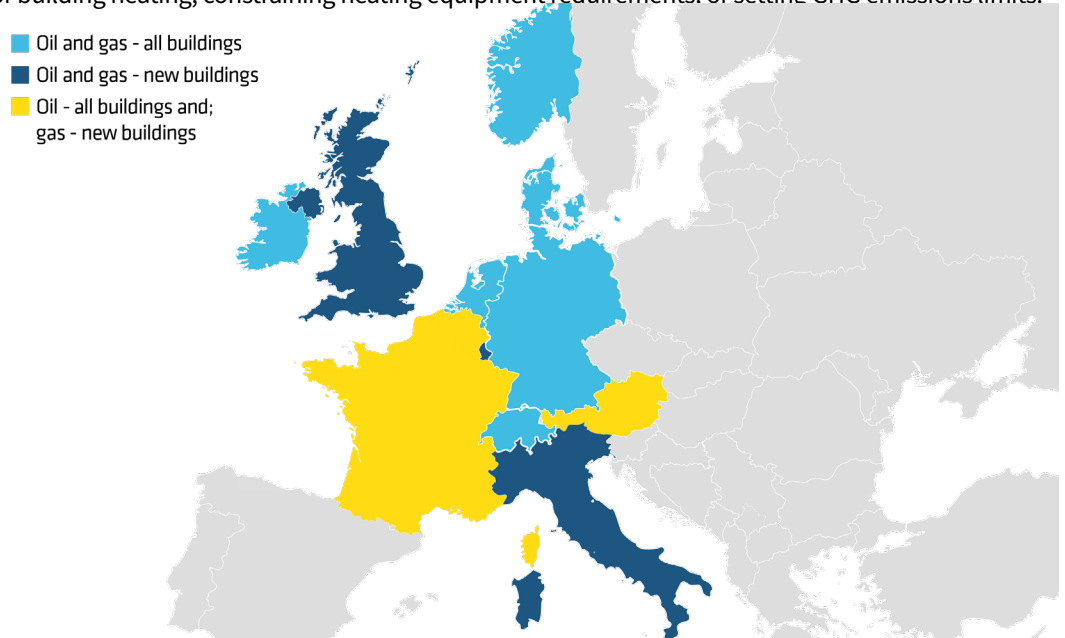

Figure 4: Overview of initiatives references in Europe

The list below details the inventoried initiatives:

Focus on the energy source:

- Ban new buildings from connecting to the gas grid (Denmark, Netherlands, United Kingdom);
- Strategically trim gas distribution pipelines, based on the age and maintenance costs of existing gas distribution pipelines, leading to gas-free districts (Netherlands and Germany);
- Ban oil heating (Norway, Flanders-Belgium, Zurich-Switzerland);
- Ban gas heating (Flanders-Belgium, France);
- Require minimum share of renewable energy used in heating, extending the number of solutions without banning any specific technology (Germany); or
- Require implementing communal thermal planning (Germany).

Focus on the equipment:

- Ban installation of oil/coal/gas heating systems (Austria, Denmark, Flanders-Belgium, France, Ireland, Netherlands, Norway); or
- Eco-design rule/label classes: set minimum level of space heating energy efficiency (Member States of the European Union).

Focus on emissions:

- Maximum threshold for CO₂ emissions/ft²/year (France); or
- Eco-design rule/label classes: set maximum level of emissions of nitrogen oxides / CO (Member States of the European Union).

A Variety of Pathways Which Demonstrate a Diverse Landscape

This jurisdictional scan **highlights that multiple solutions exist to reduce the reliance on fossil fuel heating within buildings.** These approaches diverge in their focal points, some concentrating solely on the residential sector, some on the commercial sector, and some encompassing both. They also vary in their targeted energy sources (i.e. oil, propane, and/or natural gas). Additionally, distinctions emerge in the building types addressed (i.e. existing buildings and new constructions). Lastly, the implementation stages and the timelines differ, spanning from single to multiple implementation dates and extending from 2022 to 2035. This implies that local requirements, constraints, and priorities can be addressed given the variety of tools that exist.

In Canada, the implementation of building heating decarbonization initiatives is just beginning.

These endeavors tackle a spectrum of considerations advocating for the elimination or promotion of specific energy sources, the removal of certain equipment from buildings, or establishing emission limits for greenhouse gases. Some initiatives even introduce innovative mechanisms like feebates. **Overall, these initiatives share a unified goal, which is to diminish the usage of fossil fuels, accelerate the decarbonization of buildings and ultimately reduce GHG emissions from the sector.**

Municipalities are at the forefront of propelling these initiatives in Canada. While the provincial government holds the authority to amend or revoke by-laws regulating emissions of existing buildings, this has not yet occurred in Canada, and may not occur. Provincial and federal government leadership allows for the more robust establishment of a unified framework for phasing out fossil-based heating. **Ultimately, a coherent and unified approach to policy development and implementation is required among all orders of government to support this transition.**

If you have any comments or questions, please feel free to reach out to us at this address: info@buildingdecarbonization.ca. We value your feedback for future improvements.

Montréal, QC	2021-12-31: Prohibition in new residential buildings to install oil-fired equipment. Roadmap (recommendation): No natural gas in buildings of 21,500 ft2 or less in 2024 and for all residential buildings in 2025.	◆ (Recommendation)	◆			◆		◆			◆			31/12/2021: Prohibition on new residential buildings installing oil-fired equipment		Regulation respecting oil-fired heaters: https://www.legisquebec.gouv.qc.ca/fr/document/rc/Q-2,%20r.%2011 Montreal roadmap: http://ville.montreal.qc.ca/pls/portal/docs/PAGE/COMMISSIONS_PERM_V2_FR/MEDIA/DOCUMENTS/RAPPORT_TRAVERS%20DES%20BUES_20230321.PDF http://ville.montreal.qc.ca/pls/portal/docs/PAGE/COMMISSIONS_PERM_V2_FR/MEDIA/DOCUMENTS/RECOMMANDATIONS_BATIMENTS%20C9RO%20MISSION_20230216.PDF	
Prévost, QC	2023/12/31: Installation of zero-emission equipment in new construction and replacement of fossil fuel equipment by zero-emission ones. 2035/12/31: Fossil-fuel space heating prohibited.		◆		◆		◆	◆	◆	◆	◆	◆	8/5/2023	31/12/2021: Installation in new construction and replacement in existing buildings 31/12/2035: Fossil-fuel space heating completely prohibited		https://www.ville.prevast.qc.ca/actualites/la-ville-de-prevost-prend-action-sur-la-decarbonation-des-batiments https://www.ville.prevast.qc.ca/storage/app/uploads/public/643/57e/360/64357e360bf9353331685.pdf https://www.jdc.quebec/2023/05/21/les-echos-du-conseil-de-prevost-4/#:~:text=%C3%80%20partir%20du%2031%20d%C3%A9cembre,%C3%A0%20%C3%A9%20septembre,%20ce%20sens	
Halifax Regional Municipality, NS	Requirements that all new municipal facilities be designed and constructed as net-zero.	◆				◆		◆	◆	◆	◆		23/11/2023	23/11/2023		https://cdn.halifax.ca/sites/default/files/documents/city-hall/standing-committees/211104essc1212.pdf#:~:text=The%20Administrative%20Order%20(AO)%20will%20site%20through%20%20renewable%20source https://cdn.halifax.ca/sites/default/files/documents/city-hall/legislation-by-laws/2021-002-OP.pdf	
United States																	
States - Districts																	
California	Ban on gas furnaces and water heaters by 2030. Homes in California will be required to install zero-emissions alternatives, like electric heaters. The policy only applies to new appliances, home and building owners seeking to replace retired furnaces or water heaters will only be able to select from clean and electric alternatives starting in 2030.		◆		◆	Ban on installing fossil fuel systems	◆	◆			◆	◆		2030	2030		https://www.npr.org/2022/09/23/1124511549/california-plans-to-phase-out-new-gas-heaters-by-2030
Massachusetts	The Massachusetts Department of Public Utilities has released a framework aimed at reducing reliance on gas for heating. Gas utilities are required to present climate compliance plans every five years, starting in 2025. These plans will detail their strategies for transitioning to clean energy and explore non-gas alternatives in place of gas expansion projects.	◆				Ban on using natural gas for heating	◆	◆			◆	◆			2025		https://insideclimatenews.org/news/07122023/massachusetts-natural-gas-ruling/
New York	Law requiring all-electric heating and cooking in new buildings shorter than seven stories by 2026, and in 2029 for taller buildings (some exemptions for manufacturing facilities, restaurants, hospitals and even car washes). Note: Initially, it was also proposed to ban installing fossil-based heating equipment in existing buildings (Jan 1, 2030 for over three stories and Jan 1 2035 for commercial), but these clauses did not make it into the law.	◆				Ban on using fossil fuels for heating	◆		◆	◆	◆	◆		1/1/2026 1/1/2029			https://nyassembly.gov/2023budget/2023bills/enacted/A3006c.pdf
Washington, DC	All new buildings and substantial renovations to be net-zero emissions for all commercial buildings, condo and apartment buildings, as well as single family homes taller than three stories, except for backup power.				◆	Ban on using fossil fuels for heating	◆	◆	◆	◆	◆	◆		1/1/2027			https://code.dccouncil.gov/us/dc/council/laws/24-177
Washington	No natural gas appliances for space and water heating in new buildings (commercial and multifamily with four or more stories).		◆			Ban on installing natural gas systems	◆				◆	◆		1/7/2023			https://sbcc.wa.gov/sites/default/files/2022-01/WSR_22_02_076_Full_WSEC_C_CR102.pdf https://www.energyindepth.org/washington-states-shortcut-to-ban-natural-gas/

Denmark	Ban on oil boilers in new homes in 2013 and on the replacement of oil boilers in existing buildings in 2016, with only limited exceptions. The government has also banned the installation of gas grid connections in new homes since 2013. Carbon tax on oil and gas heating has also been put in place since 1992 and has risen over time.	◆	◆				◆	◆	◆	◆	◆			1/1/2013			https://www.iea.org/reports/energy-efficiency-2023/has-the-energy-crisis-accelerated-the-shift-away-from-gas-in-residential-space-heating
Flanders, Belgium	2022: Ban on installation of oil boilers in existing buildings, but nationally, gas and oil will begin to be phased out from 2030. 2021: Gas connection for large new constructions, and extended to all new buildings from 2025.	◆	◆				◆	◆	◆	◆	◆	◆		2022			https://www.belgianewsagency.eu/flanders-advances-ban-on-gas-connections-in-new-buildings-by-one-year
France	Jul 1, 2021: No natural gas heating for new single family houses. The ban will expand to multifamily buildings in 2024. Jul 1, 2022: Ban on new oil heating systems for new construction and existing homes. 2030: Prohibition of oil heating systems. Simultaneously, maximum GHG emissions threshold have been set.	◆			◆		◆	◆	◆	◆	◆			1/1/2022			https://www.batiactu.com/edito/re2020-ja-enteriner-disparition-progressive-logements-60709.php https://particuliers.engie.fr/depannages-services/conseils-equipements-chauffage/conseils-chaudiere/decree-fin-chaudieres-foul.html#:~:text=Le%20d%C3%A9cret%20relatif%20%C3%A0%20le%2030%20gCO2eq%20kWh%20PCI
Germany	A share of 65% renewable energy in heating in new and existing buildings, which means no stand-alone main fossil fuel heating system. Strategic trimming of gas distribution pipelines, based on the age and maintenance costs of existing gas distribution pipelines, leading to gas-free districts.	◆	◆				◆	◆	◆	◆	◆	◆		2026 in smaller districts, 2028 in larger ones.			https://www.theglobeandmail.com/business/industry-news/energy-and-resources/article-german-parliament-passes-law-to-phase-out-gas-and-oil-heating/
Ireland	No oil and gas boiler installation in new (2023) and existing residential buildings (2025).		◆				◆	◆	◆	◆	◆			2023 2025			https://www.irishtimes.com/politics/oireachtas/2023/02/14/fossil-fuel-boilers-will-be-fully-phased-out-of-new-dwellings-by-the-end-of-2024-committee-told/#:~:text=Fossil%20fuel%20boilers%20will%20be%20phased%20out%20by%20the%20end%20of%202024
Italy	Share of 60% of renewable energy in new buildings.	◆					◆	◆	◆	◆	◆	◆		1/6/2022			https://www.ehpa.org/wp-content/uploads/2022/12/Fossil-fuel-phase-out-map-for-website-1000-%C3%97-700-px-1.png
Luxembourg	No natural gas in new residential buildings.	◆								◆	◆			1/1/2023			https://www.ehpa.org/wp-content/uploads/2022/12/Fossil-fuel-phase-out-map-for-website-1000-%C3%97-700-px-1.png
Netherlands	No fossil-fuel boilers in new buildings since 2022 (hybrid systems with heat pumps are allowed). Strategic trimming of gas distribution pipelines, based on the age and maintenance costs of existing gas distribution pipelines, leading to gas-free districts. A ban on connecting new homes and small commercial buildings to the gas grid, passed in June 2018. With financial contribution from the national government, 66 municipalities in the country have participating in the Natural Gas-Free Neighborhoods Program since 2018.	◆	◆				◆	◆	◆	◆	◆	◆		1/1/2022			https://www.euractiv.com/section/energy-environment/news/netherlands-to-ban-fossil-heating-by-2026-make-heat-pumps-mandatory/ https://www.rijksoverheid.nl/onderwerpen/aardgasvrij-wijken/deelnemende-gemeenten-aardgasvrij-maken https://www.global-climatescope.org/markets/in/
Norway	2017: Ban on fossil-fuel boilers in new buildings 2020: Ban on using fossil-fuel boilers, in new and existing buildings. Higher taxation on fossil fuels for heating and subsidies for residential heat pumps, beginning in 2003.		◆				◆	◆	◆	◆	◆	◆		2017: Installation of fossil fuel-based heating systems 2020: Use of heating oil			https://www.reuters.com/article/us-climatechange-norway-idUSKBN1961VL https://www.iea.org/reports/norway-2022/executive-summary https://static.agora-energiewende.de/fileadmin/Success_Stories/BP/BP_NO_Decarb-heating-bldgs/A_E_237_Succ_Stor_BP_Norway_decarbon-heating_WEB.pdf
